DUNES COVER^{BRAND}

FINE FESCUE MIXTURE

Combining the fine qualities of Chewings, creeping red and hard fescue varieties for outstanding performance in a low-maintenance turf.

- **Dunes Cover Mixture** characteristics include drought and shade tolerance, not demanding of excess moisture or nitrogen.
- **Dunes Cover Mixture** is a popular choice for low-maintenance landscapes and golf course roughs. When unmowed, Dunes Cover Mixture produces a dense, wavy, blowing-in-the-breeze look. Color ranges from a dark green in winter/spring to an amber-gold in the late summer/early fall.
- **Dunes Cover Mixture** displays a great height, texture and color contrast next to other turfgrass varieties. It is a popular choice for slopes, stream banks and around rock features. Dunes Cover Mixture adapts well to shaded areas where other grasses may have difficulty.
- **Dunes Cover Mixture** also serves as an effective low-maintenance ground cover for vineyard/winery applications.
- **Dunes Cover Mixture** can be used with wildflowers.

DUNES COVER^{BRAND}

FINE FESCUE MIXTURE

Golf course roughs, slopes, reclamation areas:..... 150-250 lbs. per acre
Home lawns, general landscape:.....5 lbs. per 1,000 sq. ft.

Starter fertilizer:..... 8-10 lbs. per 1,000 sq. ft.
Seasonal nitrogen per year: 40-50 lbs. per acre

Mowing height range: One inch (1") minimum to unmowed (12" to 18")

Establishment rates are generally 10 to 17 days — conditions may vary.
Apply irrigation as necessary prior to germination to keep seeds moist.
